

# Solenoid Valves 112, 182 Series

By using the external pilot type valves, the 112, 182 series offers diverse functions of 2-, 3- port valves to achieve multiple functions and excellent performance in a compact body.

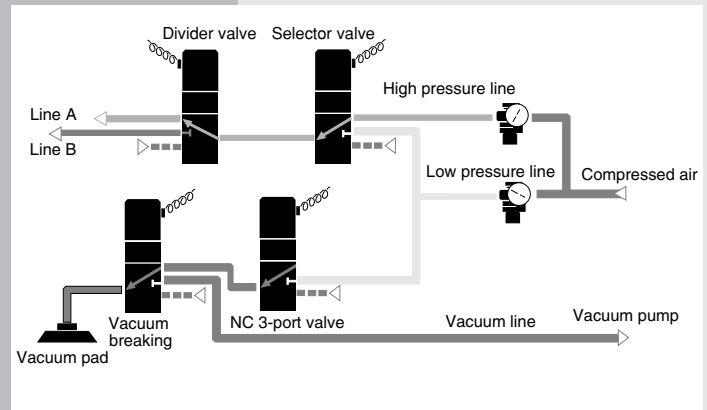

## ●112E1 and 182E1 for positive pressure applications

Ensures stable switching from low to high pressure (0~0.7MPa [0~102psi.]). Due to having no restrictions on connection port locations and flow direction, this series valve can be used as a 2-, 3-port valve for both the NC (normally closed) and NO (normally open) types, as well as for selector valves (dual-pressure switching valves) or divider valves.

## ●V112E1 and V182E1 for vacuum applications

As with positive pressure valves, this is a 2-, 3-port valve that puts no restrictions on connection port locations and flow direction, for both the NC (normally closed) and NO (normally open) types. Since this type can be used for both vacuum and positive pressure applications, it can serve as a vacuum breaking valve.

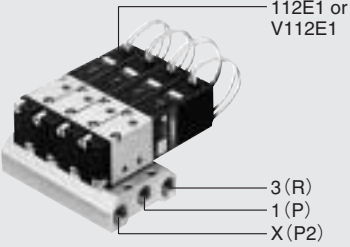

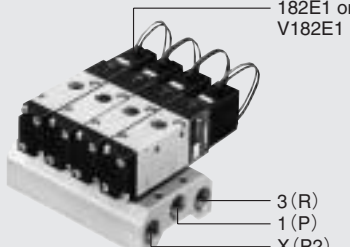

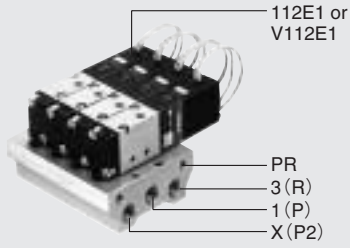

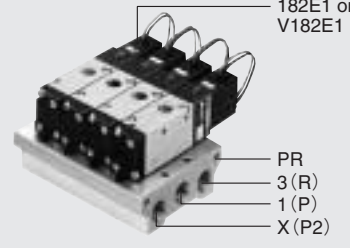

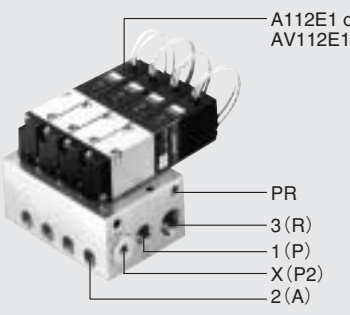

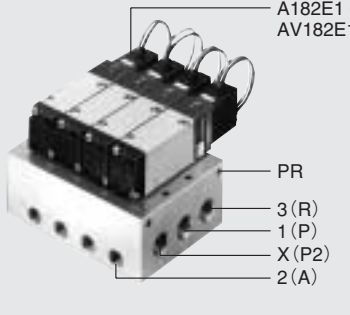

※Other vacuum valves are also available. For details, see p.852.

- Valve mounting location from the left-hand side when facing the 2(A) port.
- Specify the valve model for each station.
- Enter **-BP** when closing a station with a block-off plate without mounting a valve.
- Positive pressure and vacuum valves can be used on the same manifolds, but they cannot be mounted together.
- When ordering the non-ion specification, enter **-NCU** after the basic model code.
- Pre-wired common terminal for AC100V and AC200V is either **-CPSL** or **-CPLL**.

## Made to Order

The 112,182 series includes made to order items for further system development. For details, see p.379.

Straight connector with LED indicator  
  
**-PSLN**

- Without lead wire
- Connector and contacts included

L connector with LED indicator  
  
**-PLLN**

- Without lead wire
- Connector and contacts included

Lead wire length  
  
**-1L  
-3L**

- For plug connector
- Length -1L: 1000 [39in.]
- 3L: 3000 [118in.]

DIN connector  
  
**-39**

- Cannot be used with -L.

LED indicator with built-in varistor  
  
**-L**

- Cannot be used with -39.

Built-in interface unit  
  
**-FA**

- Enables direct control by output from micro computer or other logic devices.
- With LED indicator

Sub-base regulator  
  
**-52**

- Only for 182 series
- Regulates the pressure at each station on the manifold.

## Solenoid Valve Mass

Basic model	Mass
<b>182E1</b>	105 [3.70]
<b>A182E1</b>	115 [4.06]
<b>V182E1</b>	105 [3.70]
<b>AV182E1</b>	115 [4.06]

## Manifold Mass

Manifold model	Mass calculation of each unit (n=number of units)	Block-off plate
<b>182M□F</b>	(42×n)+40 [(1.48×n)+1.41]	19 [0.67]
<b>182M□FE</b>	(60×n)+70 [(2.12×n)+2.47]	30 [1.06]
<b>182M□A</b>	(120×n)+120 [(4.23×n)+4.23]	30 [1.06]

## Flow Rate

### How to read the graph

When the supply pressure is 0.5MPa [73psi.] and flow rate is 460 l/min [16.2ft<sup>3</sup>/min.] (ANR), the valve outlet pressure becomes 0.4MPa [58psi.].

## Manifold Connection Port Size

Manifold model	Port	Location of connection port	Port size
182M□F	1 (P)	Manifold	Rc1/4
	2 (A)	Valve	Rc1/8
	3 (R)	Manifold	Rc1/4
	X (P2)		
	PR	Valve	—
182M□FE	1 (P)	Manifold	Rc1/4
	2 (A)	Valve	Rc1/8
	3 (R)	Manifold	Rc1/4
	X (P2)		
	PR		M5×0.8
182M□A	1 (P)	Manifold	Rc1/4
	2 (A)		Rc1/8
	3 (R)		Rc1/4
	X (P2)		
	PR		M5×0.8

## Operating Principles and Symbols

## Major Parts and Materials

Parts		Materials
Valve	Body	Aluminum alloy (anodized)
	Stem	
	Lip seal	Synthetic rubber
	Flapper	
	Mounting base	Mild steel (zinc plated)
	Sub-base	Aluminum alloy (anodized)
	Plunger	Magnetic stainless steel
Column		
Manifold	Body	Aluminum alloy (anodized)
	Block-off plate	Mild steel (nickel plated)
	Seal	Synthetic rubber

Remark: Materials that generate copper ions are not used for the non-ion specification.

## Options

- Locking protruding type manual override: -83
- Solenoid with straight connector: -PSL
- Solenoid with L connector: -PLL

- Lead wire length  $l$  -PSL, -PLL: 300  
Made to order -1L: 1000, -3L: 3000

## Made to Order

- Solenoid with DIN connector: -39

- Solenoid with LED indicator: -L

- Built-in interface unit: -FA

## Made to Order

In the 112, 182 series solenoid valves, various types of made to order items are available.

### Plug connector

Straight connector with LED indicator

- Without lead wire
- Connector and contacts included

L connector with LED indicator

- Without lead wire
- Connector and contacts included

- When ordering, enter **-PSLN** or **-PLLN** in place of the normal option code for the wiring type.

Lead wire length

- For plug connector
- Length **-1L** : 1000 (mm) **-3L** : 3000

- For lead wire length, **-1L** is 1000mm [39in.] and **-3L** is 3000mm [118in.].
- When ordering, enter **-1L** or **-3L** following the wiring type option code.

### DIN connector

A compact connector that is highly resistant to dust and water splashes.

Employs a self-stripping method that eliminates the need for de-sheathing the lead wire.

- When ordering, enter **-39** in place of the normal option code for the wiring type.
- A varistor for surge suppression equipped as standard. (For the AC100V and AC200V only. For the DC12V and DC24V, a flywheel diode for surge suppression is installed as standard equipment.)
- LED indicator is not available.

### Built-in interface unit

Includes an interface unit with photo transistor. Can be directly controlled by a microcomputer and logic devices, and is equipped with fully electric noise countermeasures and LED indicators.

- When ordering, enter **-FA** in place of the normal option code for the wiring type.
- Cannot be ordered in combination with any other solenoid option.
- Solenoid voltages are AC100V and AC200V only.

### LED indicator

The LED indicator for confirmation of operation is also available without a plug connector. This creates a clean monoblock look with the compact cover.

- When ordering, enter **-L** in place of the normal option code for the wiring type.
- A varistor for surge suppression equipped as standard. (For the AC100V and AC200V only. For the DC12V and DC24V, a flywheel diode for surge suppression is installed as standard equipment.)

### Sub-base regulator

- Only for 182 series

### Specifications

Item	Order code	<b>-52(180MA-52)</b> <sup>Note</sup>
Function		1(P) port pressure regulating type
Media		Air
Operating pressure range MPa {kgf/cm <sup>2</sup> } [psi.]		0.15~0.5 {1.5~5.1} [22~73]
Maximum operating pressure MPa {kgf/cm <sup>2</sup> } [psi.]		0.7 {7.1} [102]
Proof pressure MPa {kgf/cm <sup>2</sup> } [psi.]		1.05 {10.7} [152]
Operating temperature range °C [°F]		5~50 [41~122]
Mass	g [oz.]	80 [2.82]

Note: The order code in parentheses ( ) is for the sub-base regulator only.

※For made to order details, see the solenoid valves 180 series on p.353~356.

# Handling Instructions and Precautions

## Solenoid

### Internal circuit

#### ● DC12V, DC24V

#### Standard solenoid (Surge suppression)

② and ③ are for with DIN connector (Order code: -39).

#### Solenoid with LED indicator (Surge suppression) Order code: -PSL, -PLL

#### ● AC100V, AC200V

#### Standard solenoid (Surge suppression)

② and ③ are for with DIN connector (Order code: -39).

#### Solenoid with LED indicator (Surge suppression) Order code: -PSL, -PLL

- Cautions:**
1. Do not apply megger between the lead wires.
  2. The DC solenoid will not short circuit even if the wrong polarity is applied, but the valve will not operate.
  3. Leakage current inside the circuit could result in failure of the solenoid valve to return or in other erratic operation. Always use it within the range of the allowable leakage current. If circuit conditions, etc. cause the leakage current to exceed the allowable leakage current, consult us.

## Plug connector

### Attaching and removing plug connector

Use fingers to insert the connector into the pin, push it in until the lever claw latches onto the protruded section of the connector housing, and complete the connection. To remove the connector, squeeze the lever along with the connector, lift the lever claw up from the protruded section of the connector housing, and pull it out.

※ Illustration shows the 110 series.

### Crimping of connecting lead wire and contact

To crimp lead wires into contacts, strip off 4mm [0.16in.] of the insulation from the end of the lead wire, insert it into the contact, and crimp it. Be sure to avoid catching the insulation on the exposed wire crimping section.

- Cautions:**
1. Do not pull hard on the lead wire.
  2. Always use a dedicated tool for crimping of connecting lead wire and contact.  
Contact: Model 702062-2M  
Manufactured by Sumiko Tech, Inc.  
Crimping tool: Model F1-702062  
Manufactured by Sumiko Tech, Inc.

### Attaching and removing contact and connector

Insert the contact with a lead wire into a plug connector □ hole until the contact hook latches on and is secured to the plug connector. Confirm that the lead wire cannot be easily pulled out.

To remove it, insert a tool with a fine tip (such as a small screwdriver) into the rectangular hole on the side of the plug connector to push up on the hook, and then pull out the lead wire.

- Cautions:**
1. Do not pull hard on the lead wire. It could result in defective contacts, breaking wires, etc.
  2. If the pin is bent, use a small screwdriver, etc. to gently straighten out the pin, and then complete the connection to the plug connector.

## Common terminal pre-wired plug connector

1. Pre-wired common terminal at DC positive side or AC  
Order code With straight connector: -CPSL  
With L connector: -CPLL

2. Pre-wired common terminal at DC negative side  
Order code With straight connector: -CMSL  
With L connector: -CMLL

- Cautions:**
1. The diagrams show the straight connector configuration. While the connector's orientation is different in the case of the L connector, in every case the first COM lead wire comes from the last station's mounted valve.
  2. Since the COM terminal is connected to a crossover terminal inside the connector housing, the connector cannot be switched between a positive common and a negative common by changing the connectors.

## Manual override

### Non-locking type

To operate the manual override, press it all the way down. The valve works the same as when in the energized state as long as the manual override is pushed down, and returns to the normal position upon release.

※ Illustration shows the 110 series.

### Locking protruding type

Use a small screwdriver to turn the adjusting knob several times in the clockwise direction, and lock the manual override in place. When locked, turning the adjusting knob several times in the counterclockwise direction releases a spring on the manual override, returns it to the normal position, and releases the lock.

For the locking protruding type, when the adjusting knob is not turned, this type acts just like the non-locking type; the valve enters the energized position as long as the manual override is pushed down, and returns to the normal position upon release.

※ Illustration shows the 110 series.

- Cautions:**
1. The 112 and 118 series valves are pilot type solenoid valves. As a result, the manual override cannot switch the main valve without air supplied from the X(P2) port.
  2. Always release the lock of the locking type and locking protruding type manual override before commencing normal operation.
  3. Do not attempt to operate the manual override with a pin or other object having an extremely fine tip. It could damage the manual override button.
  4. Do not turn the adjusting knob more than needed. It could result in defective operation.

## External pilot

### Piping

1. Since the 112 and 182 Series valves are external pilot type solenoid valves, always supply pilot air (pressure 0.2~0.7MPa [29~102psi.]) to the X(P2) port.
2. Because there is no restriction of flow direction on piping to the main port (1(P), 2(A), and 3(R) ports), a single valve can be used for multiple functions. The air path between the 1(P) and 2(A) ports is normally closed (NC), while the air path between the 2(A) and 3(R) ports is normally open (NO). For the actual piping, see the piping examples in the diagram below:

### Valve functions and connection port locations

#### ● For positive pressure 112E1 and 182E1

	De-energized	Energized
2-port	Normally closed (NC) 2(A) ← 3(R) (Plug) 1(P)	←
	Normally open (NO) 2(A) ← 3(R) 1(P) (Plug)	←
3-port	Normally closed (NC) 2(A) → 3(R) 1(P)	←
	Normally open (NO) 2(A) ← 3(R) 1(P)	←
Selector valve	2(A) ← 3(R) 1(P)	←
Divider valve	2(A) → 3(R) 1(P)	←

#### ● For vacuum V112E1 and V182E1

	De-energized	Energized
2-port	Normally closed (NC) 2(A) (Vacuum pad, etc.) ← 3(R) (Plug) 1(P) (Vacuum pump, etc.)	←
	Normally open (NO) 2(A) (Vacuum pad, etc.) → 3(R) (Vacuum pump, etc.) 1(P) (Plug)	←
3-port	Normally closed (NC) 2(A) (Vacuum pad, etc.) → 3(R) (Vacuum pump, etc.) 1(P) (Vacuum pad, etc.)	←
	Normally open (NO) 2(A) (Vacuum pad, etc.) → 3(R) (Vacuum pump, etc.) 1(P)	←
Vacuum breaking	Normally closed (NC) 2(A) (Vacuum pad, etc.) → 3(R) 1(P)	←
	Normally open (NO) 2(A) (Vacuum pad, etc.) → 3(R) 1(P)	←

- Cautions:**
1. The valve inner construction differs between the positive pressure (112 and 182E1) and vacuum (V112E1 and V182E1) types. While the vacuum valve is capable of combining low positive pressure and vacuum piping, positive pressure valves cannot be used under vacuum.
  2. When positive pressure is applied to a vacuum valve for vacuum breaking, etc., the air pressure should be at 0.15MPa [22psi.] or less. For higher pressure applications, consult us.
  3. Always supply 0.2~0.7MPa [29~102psi.] of pilot air to the X(P2) port. The valve will not activate without pilot air.

### Mounting base 110-21,180-21

When installing a mounting base to the valve, always use the provided screws. The recommended tightening torque for the screws is 49N·cm {5kgf·cm} [4.3in·lbf].

### Mounting valves on manifold

When mounting valves on manifold, apply the following recommended tightening torque for the valve mounting screws.

112 series: 39.2N·cm {4kgf·cm} [3.5in·lbf]

182 series: 49N·cm {5kgf·cm} [4.3in·lbf]
